

Job Description: Utility Operator

Location: Greater Noida

Reporting To: Maintenance Officer

Industry: FMCG – Bakery & Confectionery

Role Overview

We are looking for a reliable and skilled Utility Operator to manage and operate plant utilities such as air compressors, air dryers, chillers, DG sets, water systems, and AHUs in our automated cake manufacturing facility. The role ensures uninterrupted operation of utility systems, regular monitoring, and preventive maintenance to support continuous production activities.

The ideal candidate should have hands-on experience in utility plant operations within a food or FMCG manufacturing setup and should understand basic mechanical and electrical systems.

Key Responsibilities

- Operation of Utility Equipment
 1. Operate and monitor utilities such as compressors, chillers, cooling towers, AHUs, and DG sets.
 2. Ensure proper startup, shutdown, and load management as per production needs.
 3. Record operational parameters and maintain daily logbooks.
- Preventive Maintenance Support
 4. Carry out routine maintenance checks on all utility equipment.
 5. Assist the Maintenance Officer in preventive maintenance schedules.
 6. Identify and report any abnormal noise, vibration, or leakages immediately.
- Monitoring & Control
 7. Maintain pressure, temperature, and flow parameters within prescribed limits.
 8. Check oil levels, filters, belts, and cooling water regularly.
 9. Ensure timely draining and cleaning of air receivers and condensate traps.
- Breakdown Support
 10. Support in troubleshooting and repair during equipment breakdowns.
 11. Coordinate with maintenance team for quick restoration of utilities.
 12. Record downtime and assist in root cause analysis.
- Housekeeping & Safety

13. Maintain cleanliness and order in the utility room and surrounding areas.
 14. Follow safety protocols while operating electrical and mechanical systems.
 15. Use PPE and adhere to lock-out/tag-out procedures.
- Energy Management
16. Monitor power, air, and water consumption and report anomalies.
 17. Support energy-saving initiatives and assist in equipment efficiency improvement.

Qualifications & Experience

Education: ITI in Electrical / Mechanical / Refrigeration or related trade.

Experience: 2–5 years in utility operation within FMCG / Food / Bakery industry.

Should be familiar with compressors, chillers, AHUs, and DG sets.

Basic understanding of preventive maintenance and safety standards.

Key Skills

- Operation and maintenance of compressors, chillers, and utility systems.
- Understanding of mechanical and electrical fundamentals.
- Record keeping and daily reporting discipline.
- Awareness of energy management and safety standards.
- Teamwork and coordination with maintenance and production departments.

What We Offer

- Opportunity to work with modern utility systems in a fully automated cake manufacturing unit.
- Learning exposure to advanced food-grade utilities and maintenance systems.
- Career growth in a stable and expanding FMCG organization.
